

# ZAMAX

7.5g/kg maduramycin ammonium  
80g/kg nicarbazin

## ACTIVE CONSTITUENTS

7.5g/kg Maduramycin Ammonium and 80g/kg Nicarbazin

## ADVANTAGES

ZAMAX is a combination of two proven anticoccidials, maduramycin and nicarbazin. This combination optimises the different modes and sites of action of both ingredients and can be utilized effectively in all seasons in shuttle or rotation programs with other anticoccidials.

## MODE OF ACTION

Maduramycin is an ionophore anticoccidial that acts during the first 48 hours on multiple early stages of the *Eimeria* lifecycle. Maduramycin controls the coccidia by disrupting the transport of sodium and potassium ions across the cell membrane. Nicarbazin is complementary as it acts on the later stages of the *Eimeria* lifecycle, reducing the damage to intestinal tissue that these stages of coccidia can cause.

## INDICATIONS

For use in broiler chickens for the prevention of coccidiosis caused by *Eimeria acervulina*, *Eimeria maxima* and *Eimeria tenella* and as an aid in the prevention of coccidiosis caused by *Eimeria necatrix*, *Eimeria brunetti* and *Eimeria mivati*.

## USAGE

Veterinary Prescription Required. For Animal Use Only.

**Poultry** Mix into feed at a level of 500g per tonne to obtain a concentration of 3.75mg maduramycin ammonium and 40mg nicarbazin per kg of feed respectively..

## PACKAGING

25kg bags. Multilayered polyethylene bag to ensure product stability in humid climates.

Store in a cool dry place with adequate ventilation.

## PRECAUTIONS

Withdrawal Period for Meat: NIL

Do not feed to birds which are producing eggs or egg products for human consumption.

Shelf Life of 24 months from date of manufacture. Expiration Date and Batch Number are indicated on packaging.
